

# *Boreclean*

***Breaking Agent for  
Developing Water Wells***

## **DESCRIPTION**

**Boreclean** is a highly effective break back product and clay dispersant for development and clean-up of water wells. Boreclean is used to remove bentonite from the borehole and will also remove naturally occurring clays from around the screens and gravel pack.

## **APPLICATIONS**

- **Boreclean** enhances well development by breaking down bentonite and natural clay build-up.
- Helps removal of mud residue from water bearing formations.
- Thins bentonite and polymer drilling fluids.
- Disperses sticky clays.
- Breaks up the filter cake formed by the drilling fluid.

## **ADVANTAGES**

- Boreclean increases well productivity
- Decreases development time and cost
- Non-toxic and non-flammable

## **TYPICAL PROPERTIES**

Physical appearance	White powder
pH	7.0 – 8.0
Specific Gravity	1.21

## **USAGE**

Add 4 -6 kg /1000 litres water and agitate by jetting or surging through the screen.

## **PACKAGING**

15 kg plastic pails
